Subject: Docking System Concept & Cost Estimate
Attachments: Sheboygan Wharf Pier Example.pdf

Hi Paul,

Attached is some information on the docking system I was describing at our meeting last night. This is the system we installed in Sheboygan about 10 years. As far as I know, they haven't had any issues with it. It's designed to be a maintenance free system. We fabricated the system in 12' segments.

A budgetary cost estimate would be about \$1,300 / LF. That's pretty rough estimate, but I think it's on the conservative side. I didn't have time to really examine the existing conditions yet to see how much demo/prep work would be required to get started.

Let me know if you need any additional information.

Thanks,

$$150' \pm \times \$1,300 = \$195,000$$
