Hi Matt, it looks like that is a mapped waterway so we assume it is navigable and regulated. They would need a permit to place riprap or any other structure in the waterway. The application materials can be found here: <http://dnr.wi.gov/topic/waterways/Permits/StreambankErosionGP.html> for General permits for each property, which is a \$303 fee and we issue it within 30 days. Or here: <http://dnr.wi.gov/topic/waterways/Permits/StreambankErosionIP.html> for all property owners to go together in an Individual permit with a \$603 fee and a 30 day public notice period, so it does take about 2 months or so to issue. I do not know of any assistance for erosion control. Please let me know if you have any further questions.

Hi Carrie

We have an issue where the bank of a small stream/ditch is eroding away. The area that is eroding is privately owned in the Vista Road/West Custer St area. Large amounts of the hill side are falling away and the owners in the area are concerned for the future of their homes. We were wondering if you could help answer a few question and give us some insight to what we could do.

1. Is there anything that they would be allowed to do to stop or slow the erosion?
2. Can they place rip rap or broken concrete along the edge?
3. Do you know of any form of assistance that they could receive to help with the costs?

Any information you could give will be appreciated. I have attached some photos so you to see some of the damage but they don't seem to show it very well.

With the heavy rains this spring we have had some larger slides also occur along Silver Creek in Silver Creek Park and some other areas.

Thanks

Matt Smits

Hi Al,

Thanks for the heads up. Agree that this should be discussed at the next PI meeting and that we should have as much data going into that meeting as possible. (As we learned during last night's drainage discussion, once residents make their mind up that the City is responsible for their drainage problems, it's very difficult to get them to change their mind.)

Thanks,

Dave Soeldner | Alderman, District 8 | City of Manitowoc | 920-629-6444 | www.manitowoc.org

Subject: 4750 Vista Road

Hi Dave,

I have been in contact with Richard Bloedorn 4750 Vista Road, Manitowoc. He lives on the north side of Custer next to a ravine that runs under Custer Street going north and south that leads to the Manitowoc River ultimately in Camp Vits Park. He and the neighbors are having problems in there backyards are disappearing due to heavy erosion, in some places the ravine reaches 20 plus feet in height. He and the neighbors believe its due to more hard surface water being directed towards the ravine than what was 20 years ago. City staff are aware of the issue and have checked it out a few times, have taken pictures. It has come to a point where it has to be discussed at the Public Infrastructure level I think, I was hoping you could add it to the next Public Infrastructure meeting agenda to bring some resolve to this topic. I have ask Dan to get the storm sewer runoff maps of that area for the meeting. thx..
