MEMO

TO: Mayor Nickels, City Council Members
FROM: Dan Koski, Director Public Infrastructure
DATE: April 2, 2014
RE: Electronic Leak Detection System

The Red Jacket Electronic Leak Detection for the fuel system at DPW failed and we have moved to the temporary backup mechanical system. The Red Jacket System electronic system we have is obsolete and parts are no longer available. We have received three quotes for a replacement electronic leak detection system. The low quote was \$4,997.78 plus the .1 risk management software of \$1,440.00 for a total of \$6,437.78. The UST Recovery Fund would be used for this repair which had approximately \$11,000 at the end of 2013.

I recommend entering into the attached proposal with Walt's Petroleum Service Inc., the low quote, for this work.

Respectfully,

Dan Koski

RECEIVED
PROPOSAL FEB 24 2014
Feb. 14, 2014

DEPT. OF PUBLIC WORKS

Thank you for the opportunity to bid on your leak detection upgrade. The following is included:

- Secure necessary state permit
- (1) Gilbarco EMC software upgrade w/ECPU2
- (1) Six-input pressurized line leak interface module
- (1) Three-output pressurized line leak controller module
- (3) Pressurized line leak detectors w/o swift checks
- Remove old Red jacket PPM 4000 equipment
- Installation, electrical, system test & training included

It appears that the competitive proposal does not have the pressurized line leak detection testing .1 risk management software. The .1 risk management software allows you to do .1 & .2 testing.

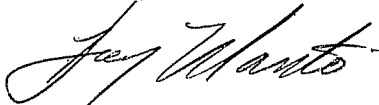

The proposed software is only for a 3.0 gallon per hour leak rate. This is a catastrophic test. The same as performed by your current leak detectors. The difference is that your current system is mechanical and the proposed system is electronic.

The .1 & .2 is more precise and shuts down the line immediately. The proposed system alerts you after the problem occurs. For .1 risk mgt. software add \$1440.00

TOTAL \$4,997.78

This proposal contains no state sales tax.
