

Chris,

I was told you are the contact for my request. I would like a crosswalk installed at our 1226 south water street facility from the plant to our parking lot across the street. With nearly 100 employees and the rate of speed on water street there is a safety concern and hopefully this will slow traffic down.

A second thought on this project would be to include a no parking area within 20 feet of the proposed crosswalk.

A higher up thought of a flashing sign system when someone entered the crosswalk. Personally, if this slows the process then we forget this idea and move forward with the cross walk.

Bottom line: with the traffic speed and our pedestrian traffic in this area; this is an accident waiting to happen.

Thanks,

Steven Brunner
Environmental, Health and Safety Manager
