Good Morning Dan and Greg,

What would be the procedure to get this on the agenda for the December PI committee meeting?

Thanks,

Hi Dave,

I know that MPU shared a sample ordinance with the City, but I am not sure that we ever adopted one. I am copying Kathleen in case she has any other information.

Could you send me your proposed locations or a map showing the locations.

We will certainly work with you on this project.

I would imagine that we would run this through the PI Committee as usual.

Subject: Small Cell Pole Question

Good Morning Dan and Greg,

Does the City have a policy—and, if not, does the Engineering Department have a position—on utility pole height in the City ROW? Nsight is exploring a small cell network in the City and we have determined that we would probably need 60' tall poles. We have had discussions with MPU and in some cases we would like to replace existing MPU poles, but in other locations we'd have to place a new pole, and it would be on the opposite side of the street as existing power poles etc. In all, we are seeking 8-10 poles throughout the City. I'm happy to provide maps or any other information that you would need. Thanks much for your help!
