TO: Public Infrastructure Committee
FROM: Chad Scheinoha, Operations Division Manager
RE: 20-0255 Concrete increase for permit patches

Based on the costs to perform pavement restoration work by DPI crews during the 2019 construction season, new rates have been established for the city to perform pavement restoration for Right of Way Excavation Permit Holders during the 2020 construction season.

Under MMC 7.140 Restoration of Street Surface, The City Engineer shall maintain a schedule of prices for the temporary and permanent restoration of the street surface and shall equally enforce such charges as are necessary to fund the approximation of the actual cost of street restoration.

I recommend the City accept/approve this request for the following reasons:

1. Based on the costs to perform work for the 2019 construction season about an 8% increase is required to cover the cost of restoration work performed by streets maintenance crews. This increase is due to material, equipment, and wage increases, along with annual adjustments for overhead and crew experience levels.
