If such breach is of a nature that cannot be reasonably cured within such thirty (30) day period, such party shall have commenced such cure and shall be diligently pursuing the same. 10. Rights and Remedies Cumulative. The rights and remedies of the Owner/Developer and the City, whether provided at law or in equity or by this Agreement, shall be cumulative, and the exercise of any one (1) or more of such remedies shall not preclude the exercise at the same or different times of any other such remedies for the same event of breach or of any remedies for any other event of breach by the other parties. No waiver made by any party with respect to the performance or manner or time of any obligation of any party under the Agreement, shall be considered a waiver of any rights of the Owner/Developer or the City (as the case may be) to enforce any other obligations of the parties under this Agreement. A delay of any party in the enforcement of any term, covenant, condition, warranty or promise contained in this Agreement shall not be construed as a waiver of any party's right to enforce said obligations.
11. Continuing Obligations. The obligations of each of the parties shall continue until such time as this Agreement is terminated in writing by the Owner/Developer and the City.

Exhibit A - Location Map

Storm Water Management Practices Covered by this Agreement

The storm water management practices covered by this Agreement are depicted in the reduced copy of the construction plans, as shown below. The practices includes one (1) stormwater Mechanical treatment unit located in a Parcel of land located in the NE ¼ of the SE ¼ of Section 8, T. 19N., R. 24E., City of Manitowoc, Manitowoc County, Wisconsin.

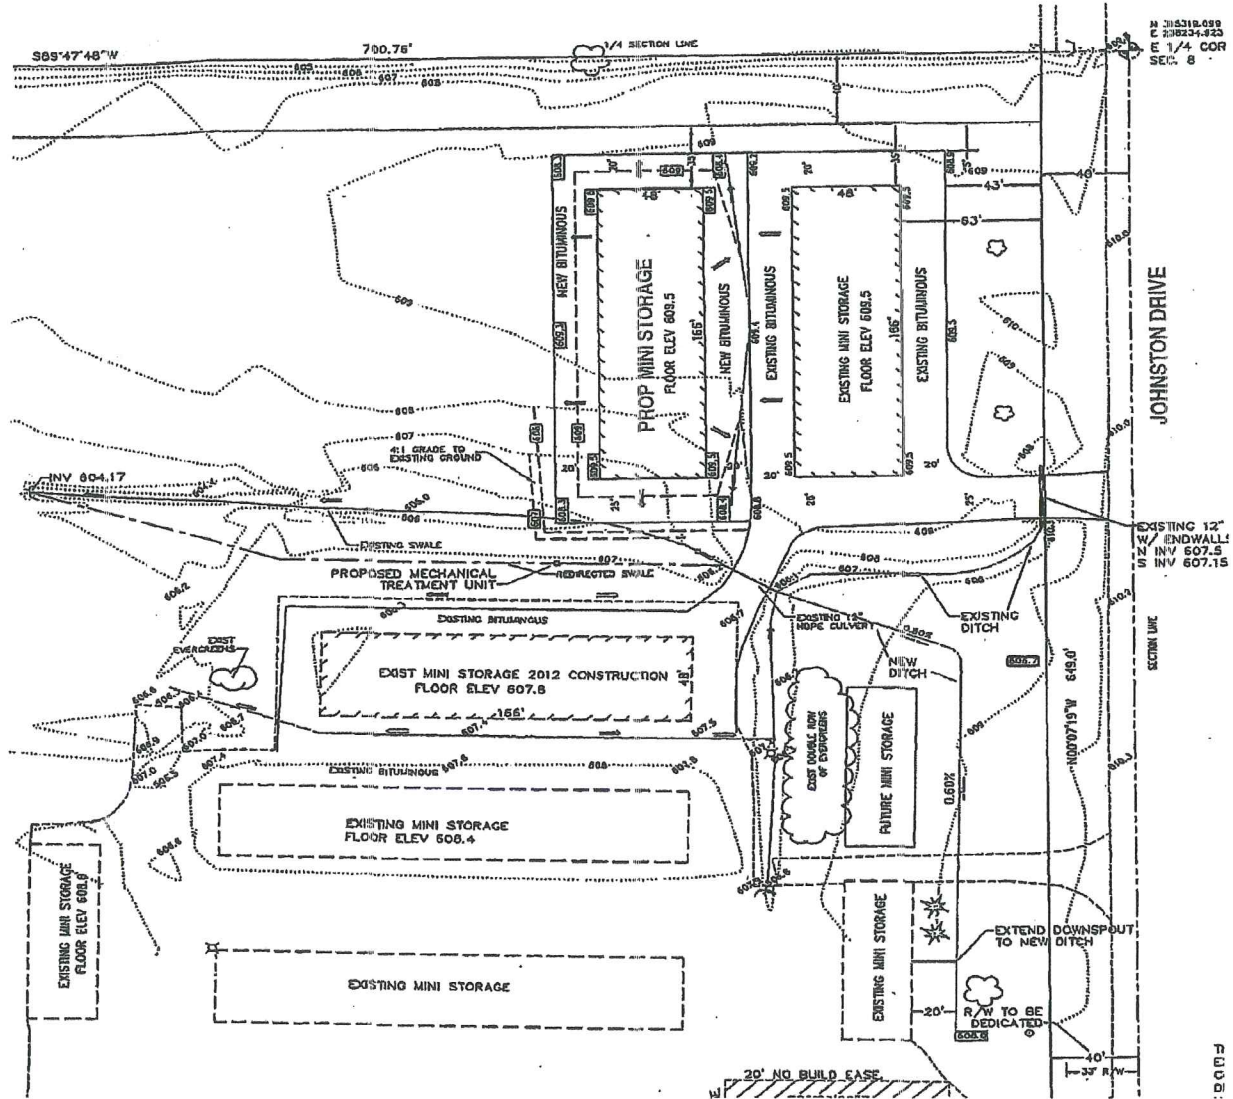

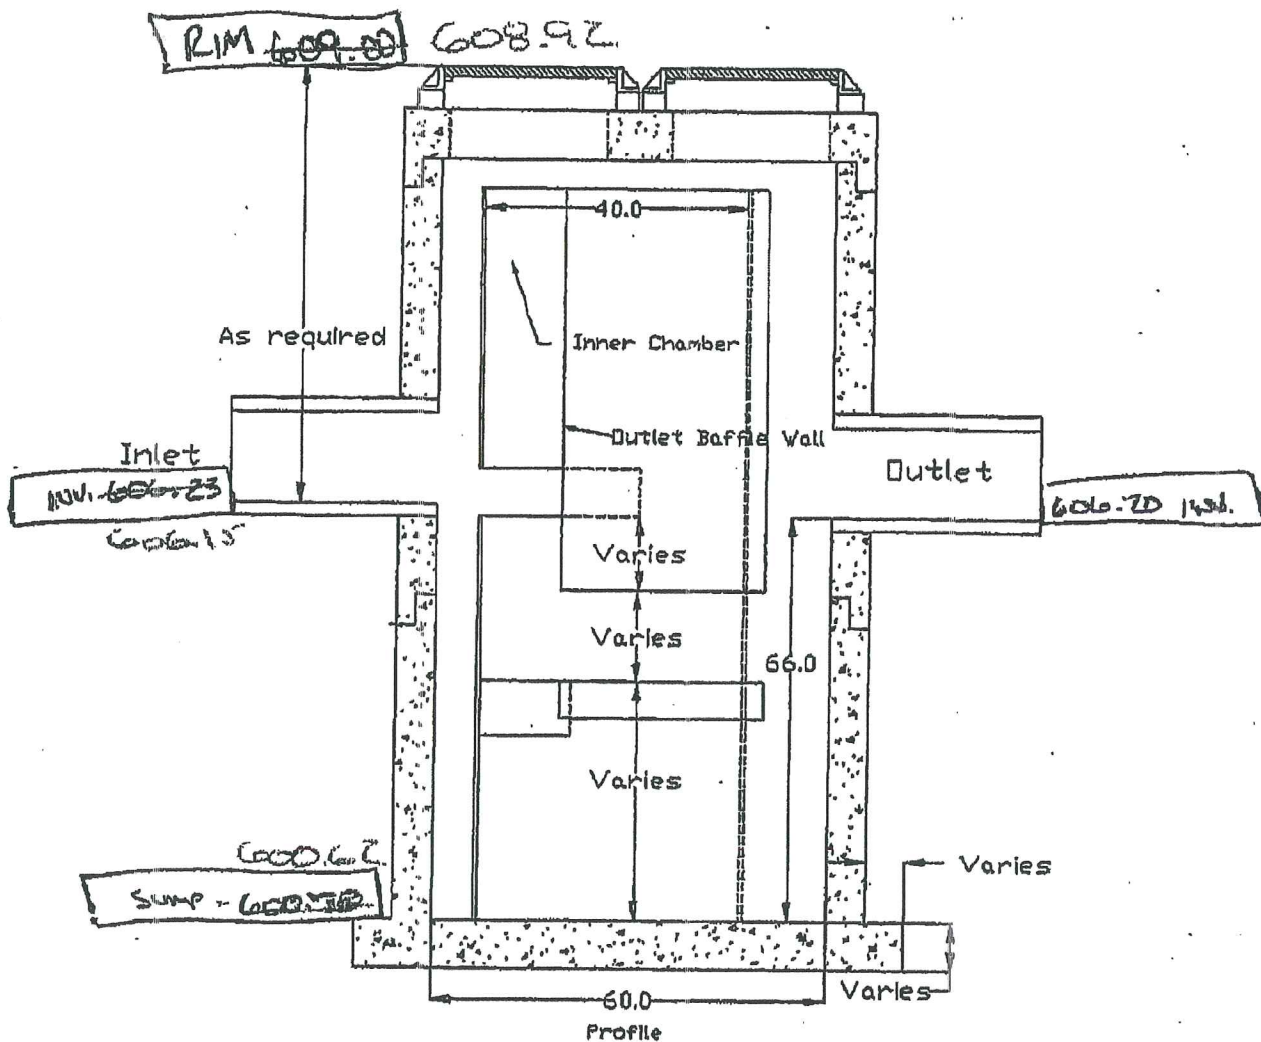

Exhibit B Minimum Storm Water Practice Maintenance Requirements

This exhibit explains the basic function of each of the storm water practices listed in Exhibit A and prescribes the minimum maintenance requirements to remain compliant with this Agreement. The maintenance activities listed below are aimed to ensure these practices continue serving their intended functions in perpetuity. The list of activities is not all inclusive, but rather indicates the minimum type of maintenance that can be expected for this particular site. Access to the stormwater practices for maintenance vehicles is shown in Exhibit A. Any failure of a storm water practice that is caused by a lack of maintenance will subject the responsible party to enforcement of the provisions listed in this Agreement by the City of Manitowoc.

System Description:

For details on the Stormwater Mechanical Treatment Unit and a complete list of Maintenance responsibilities see the Stormwater Management Plan and the Erosion Control Plan for Lakeshore Mini Storage on file at the City of Manitowoc Engineering Office.

Stormwater Mechanical Treatment Unit Details:

U.S. Patent No. 6,951,619

Dimensions in Inches

Permanent Pool Volume = 800 US gallons

The Hydroguard must be cleaned after the construction period

if it is used as a sediment and erosion control measure

The Hydroguard should be inspected once per year for

stabilized sites

Inspection will determine the maintenance frequency (annual

maintenance or once every two years typical for stabilized

sites)

Sites with unstable conditions (exposed soil or materials

storage) will require more frequent inspection and maintenance

Minimum Maintenance Requirements for appropriate treatment practice:

To ensure the proper function of the storm water management practices described above, the following activities must be completed in April and September of every year and after each rainfall event of greater than 2 inches within any 24-hour period:

1. All outlet pipes must be cleaned to ensure there is no blockage from floating debris or ice, especially the washed stone in front of the outlet structure and the trash rack on the riser in the main basin. Any blockage must be removed immediately. The washed stone must be replaced when it becomes clogged.
2. Remove any debris or litter that has accumulated in the structure. Detention facilities tend to accumulate debris and litter. It is important to remove to ensure proper functioning of the structure.
3. Grass swales shall be preserved to allow free flowing of surface runoff in accordance with approved grading plans. No buildings or other structures are allowed in these areas. No grading or filling is allowed that may interrupt flows in any way.
4. Grass swales, inlets and outlets must be checked after heavy rains (minimum of annually) for signs of erosion. Any eroding areas must be repaired immediately to prevent premature sediment build-up in the downstream forebay or basin. Erosion matting is recommended for repairing grassed areas.
5. NO trees are to be planted or allowed to grow on the earthen berms. Tree root systems can reduce soil compaction and cause berm failure. The berms must be inspected annually and any woody vegetation removed.
6. If floating algae or weed growth becomes a nuisance (decay odors, etc.), it must be removed from the basin or the forebay and deposited where it cannot drain back into the basin. Removal of the vegetation from the water reduces regrowth the following season (by harvesting the nutrients). Wetland vegetation must be maintained along the waters edge for safety and pollutant removal purposes.
7. When sediment in the forebay or the basin has accumulated to an elevation of three feet below the outlet elevation, it must be removed. All removed sediment must be placed in an appropriate upland disposal site and stabilized (grass cover) to prevent sediment from washing back into the basin. The forebay will likely need sediment removal first. Failure to remove sediment from the forebay will cause resuspension of previously trapped sediments and increase downstream deposition.
8. Periodic mowing of the grass swales will encourage rigorous grass cover and allow better inspections for erosion. Waiting until after August 1st will avoid disturbing nesting wildlife. Mowing around the basin or the forebay may attract nuisance populations of geese to the property and is not necessary or recommended.
9. The application of EPA/State Registered Chemicals to detention basins/ponds or lakes is regulated by the WDNR. With few exceptions, a permit must be filed with and approved by the WDNR, prior to chemical treatment.
10. Any other repair or maintenance needed to ensure the continued function of the storm water practices or as ordered by the City of Manitowoc under the provisions listed in this Agreement.
