RE: NOTIFICATION OF INSPECTION DUE

CROSS CONNECTION CONTROL DEVICE

Our records indicate that the cross-connection control device(s) or assembly(s) listed below are past due for the periodic test by a department-registered Cross-Connection Control Device Tester. The due dates are the expiration dates listed.

A cross-connection control device or assembly is a mechanical valve that protects the potable water supply system from contamination. Since a physical connection between the potable water supply and substances of either unknown or questionable quality exists in the facilities listed below, a cross-connection control device or assembly was/is required. Each installed device or assembly must be tested at least annually to ensure that it continues to function as designed.

It is the owner's responsibility to have a performance test conducted by a department registered Cross-Connection Control device tester prior to the device or assembly being put into service and at least annually thereafter. Also, the device or assembly must be tested whenever repairs or replacements occur. Every time a test is performed, a test report must be submitted to this office with a \$30 check for processing made payable to "Industry Services", or the test results can be entered online at a reduced fee of \$20 per report.

All CCC device testers must be registered by Industry Services. In order to find a registered tester, contact any independent CCC testing agency or your local plumbing contractor.

If the required test has been completed, but the report was not sent in, please attach the report to this letter and return to the above address. Please disregard this notice if your report is already in the mail. If the device or assembly was never installed or has since been removed from service*, please notify this office in writing as to the reason(s) for not installing or removal of the device or assembly. If you have difficulty identifying the plumbing device, please contact a department registered Cross-Connection Control Device Tester or your local plumbing inspector for assistance.

*Cross Connection Control devices or assemblies taken out of service must be disconnected and physically removed from the water line. The department must also be notified in this case.

Cross Connection Control Device(s):
