Brooks Machine Health Monitoring Service

Brooks and John Deere monitor your machine continuously for the term of basic/extended warranty.

- **JDLINK Alerts** - The Brooks Tractor Machine Monitoring Team uses sophisticated software to track and monitor alerts generated from your machines through telematics and JDLINK Machine Connectivity. Diagnostic Trouble Codes (DTCs) transmitted from your Deere machines are sent to the Brooks Machine Monitoring Center where the team can perform remote diagnostics including reading and clearing diagnostic codes, running diagnostic tests, and viewing/analyzing machine performance data.
- **Expert Alerts** - A team of John Deere experts at their Machine Health Monitoring Center in Dubuque, Iowa use data analytics to predict service needs and provide notifications to the Brooks Machine Monitoring Team, which enables them to contact customers about an impending or potential issue and gives them solutions to resolve the issue before it causes a machine problem.
- **Maintenance Alerts** - The Brooks team will also provide you with maintenance alerts before they become due to help with advance planning for the service.
