Chad, thank you for meeting with me last week to look at the "Dale Street Park" water issues some of us Forest Circle residents are having. The problem seems to be centered at the West side/end of the Dale Street Park where the topography slopes toward Forest Circle primarily effecting 815 Forest Circle.

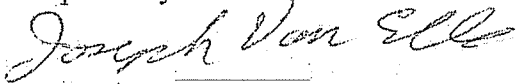

The water issues vary on the west side of the park from one property owner to another, as the slope changes. My property at 815 Forest Circle experiences runoff issues along with significant **groundwater percolating** up through my garage floors. This water action has caused significant shifting and cracking on my garage floor

I am asking the appropriate City of Manitowoc Department to review the situation and budget a remedy as soon as practical.

It would appear to me that the simplest solution may be to dig a "French Drain" down the effected west side/end of the park and drain the runoff and underground water into the Dale Street storm sewer.

My immediate concern is to remedy the water problem so I can proceed to correct my damaged garage floor.

Respectfully,

Joseph Van Ells
