RE: Quay Street Electric Vehicle Charging Station

Both MPU and the electric vehicle charging station manufacturer, Chargepoint, have consulted industry standard for our geographical area. It is recommended that a \$0.25 per hour kilowatt per hour charger rate. This would equate to \$1.60 per hour of charging. This level of fee would cover the cost of the electricity itself plus administrative fees, which are minimal.

To discourage an individual from continuing to park if the vehicle is done charging, a \$10.00 per hour charge is recommended and is automatic once the charging station senses a full battery of the vehicle.
