(1) This illustration represents a mathematical calculation of potential interest cost savings (cost), assuming hypothetical rates based on current rates +10 bps for municipal bonds as of $8 / 15 / 19$. Actual rates may vary. If actual rates are higher than those assumed, the interest cost savings would be lower. This illustration provides information and is not intended to be a recommendation, proposal or suggestion for a refinancing or otherwise to be considered as advice.
(2) Present value calculated using the All Inclusive Cost (AIC) of $2.12 \%$ as the discount rate. Inclusive of estimated interest earnings ( $2.00 \%$ )
(3) Assumes subsidy is received through 2/1/20.
