Minimum Maintenance Requirements Stormwater Wet Pond:

To ensure the proper function of the storm water management practices described above, the following activities must be completed:

- 1. The wet basin and all components (grass swales, inlet pipe, outlet structure, outlet pipe) should be inspected after each heavy rain, but at a minimum of once a year. If the pond is not draining properly, within 72 hours, further inspections may be required by persons with expertise in storm water management and/or soils.
- 2. The outlet pipes, outlet structure baffle plate and overflow weirs must be kept free of debris. Any blockage must be removed immediately.
- 3. Any eroding areas must be repaired immediately to prevent premature sediment build-up in the system. Erosion matting is recommended for repairing grassed areas.
- 4. No trees are to be planted or allowed to grow on the earthen berm or on the inside bottom of the pond. The basin must be inspected annually, and any woody vegetation removed.
- 5. When sediment has accumulated to an elevation of three feet below outlet elevation, it must be removed. All removed sediment must be placed in an appropriate upland disposal site and stabilized (grass cover) to prevent sediment from washing back into the pond.
- 6. No grading of filing of the pond or berm other than for sediment removal is allowed.
- 7. Periodic mowing of the grass around the ponds (to the normal water elevation) will encourage rigorous grass cover, eliminate tree growth and allow better inspection for erosion.
- 8. Any other repair or maintenance needed to ensure the continued function of the ponds as ordered by the City or WiDNR shall be carried out.
